To whom it may concern

As a student in the NMC CIT Developer Program, Brie Ellis has actively pursued her craft. She will push herself by looking for information that allows her to develop unique solutions to coding problems and Brie has often found interesting alternatives to those problems.

I have also found Brie respectfully challenging as she seeks to clarify her learning and knowledge base. During class or in small groups, she will prod both myself and other students if she has not fully grasped the current concept, or simply feels that more clarification is necessary. Her peers look to her at times to lead both discussions and inquiries.

Brie took a leadership role this fall in the Object-oriented Programming course. The project involved the team choosing a new technology, exploring it, and developing an extensive training module including multimedia and assessments. Brie, having a strong interest in web applications, was a strong influencer and contributor to the team's choice of developing an app to scrape websites. She led the team's code development group and shared her knowledge to bring other team members up speed.

In my opinion, Brie Ellis is a strong candidate for many developer positions. Her interest, curiosity, and willingness to work hard, and with others, will serve her well in any position. I can recommend Brie Ellis as a candidate worth consideration.

Sincerely,

A handwritten signature in black ink, appearing to read "John E. Velis". The signature is fluid and cursive, with the first name "John" being the most prominent.
